Powerguard 1250 Solar Roof Tile

Completion

2005

SADDLEBACK CHURCH

Martifer Solar and Saddleback Church

Under Martifer Solar USA's previous banner, A&M Energy Solutions, Martifer integrated a 250kW photovoltaic system for Saddleback Church in Lake Forest, California. When completing non-profit projects, Martifer knows that every dollar saved on electricity increases funds for the organization's primary goals. Martifer was able to maximize the available incentives for Saddleback Church by taking on the rebate paperwork. Saddleback Church was an early adopter of a clean, renewable energy and continues to lead their community by example.

Saddleback Church and Renewable Energy

Pastor Warren and his wife Kay are passionate about global missions, including working towards a sustainable future. To effectively carry out Pastor Warren's sermons, it was critical to cut back on overhead costs. Saddleback's solar array helped Pastor Warren free up funds and encourage his congregation to adopt an environmentally responsible lifestyle by reducing each member's carbon footprint. Pastor Warren founded Saddleback Church in Lake Forest in 1980 with one other family. Today, it is one of America's most influential churches, with approximately 20,000 people attending the weekend services.
